Leading Provider of Solutions and Services for Embedded Systems

- ETAS with over 850 associates is part of the Bosch Group
- ETAS is truly international – with 23 offices in 13 countries around the world
- ETAS subsidiary ESCRYPT is a specialist for embedded systems security

ETAS Customers and Domains

Trusted by OEMs, tier one and ECU suppliers, as well as engineering service providers:

Commercial Vehicles
Automotive Heavy Duty Engines
Railway **Powertrain**
Construction Machines
Consumer Electronics
Off-Highway

ESCRYPT Customers and Domains

The ESCRYPT customer base includes:

Automotive
Mobile Machines & Transportation
Energy
Consumer Electronics **Mobile Devices**
Industrial Automation
Financial & Government **Logistics**
Health Care

Software Engineering

Test and Validation

Measurement, Calibration, Diagnostics

Embedded Security

Real Time Applications

ETAS Products

Consulting and Engineering Services

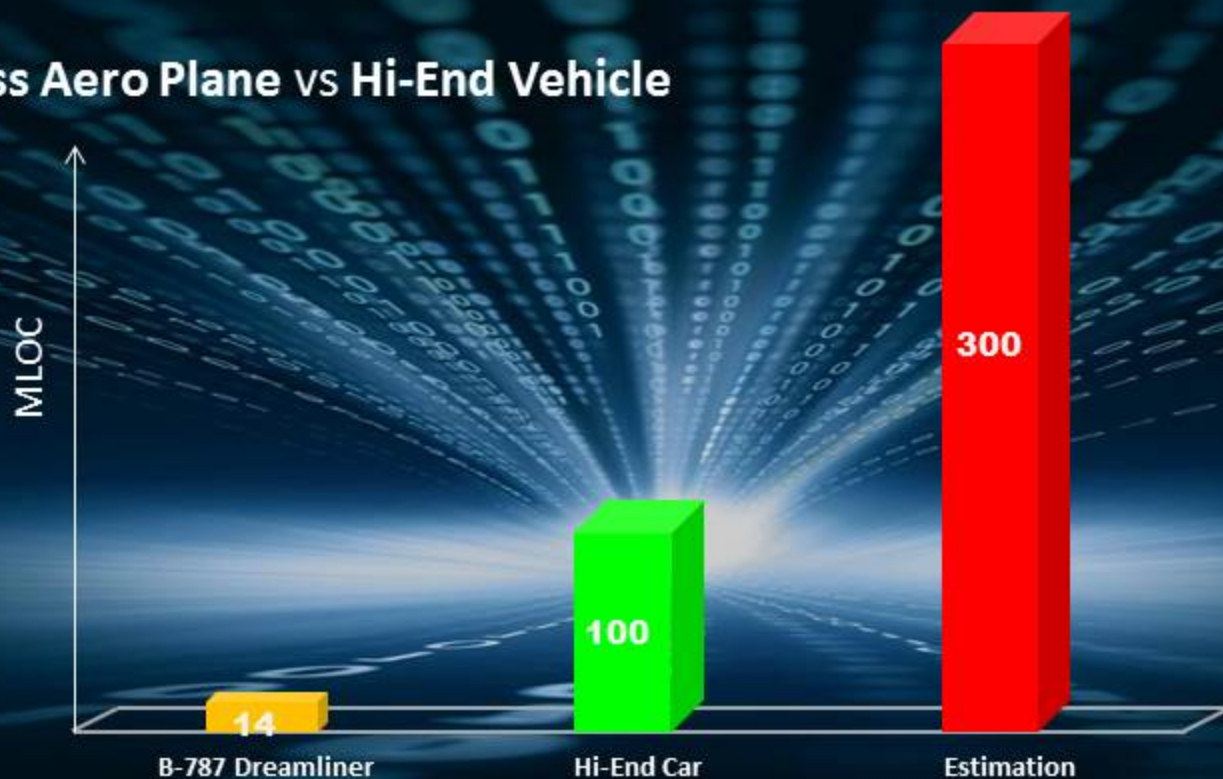

Virtualization Technology

1st Class Aero Plane vs Hi-End Vehicle

Source:
"Codebases", Information
is Beautiful, Nov 2014

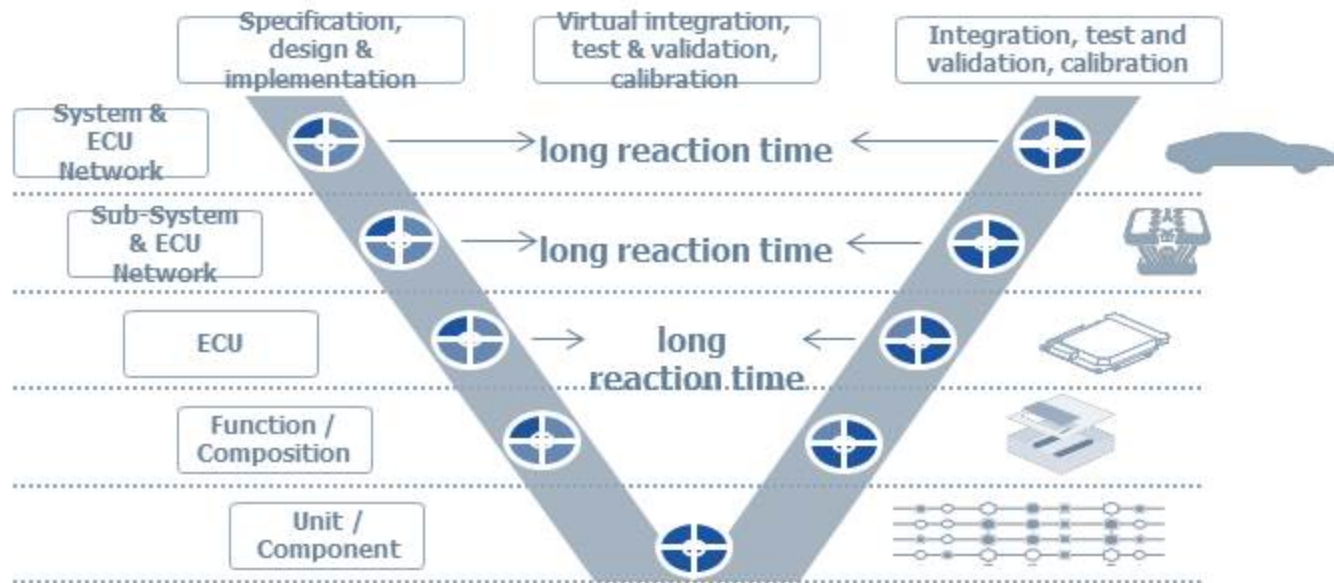

Feedback Loops in the standard V-Model ...

... require **hardware prototypes** for validation purposes

... result in **long reaction times** through late validation

Solution approach "Virtualization" ...

... object under test can be verify **without prototype**

... reduce reaction time, increase quality

Solution approach "Virtualization"

- **Frontloading** through **early** execution of **debugging, validation, verification and calibration without** complete target **hardware** being available.
- Object under test and its environment can be **simulated** through different phases of the **V-cycle**.
- Target is to **increase development efficiency** by
 - **reducing** development and reaction **time**
 - **reducing** development **costs**
 - **increasing quality**

LABCAR

– a powerful and flexible test system.

Regulatory Testing

REAL Car & REAL Environment

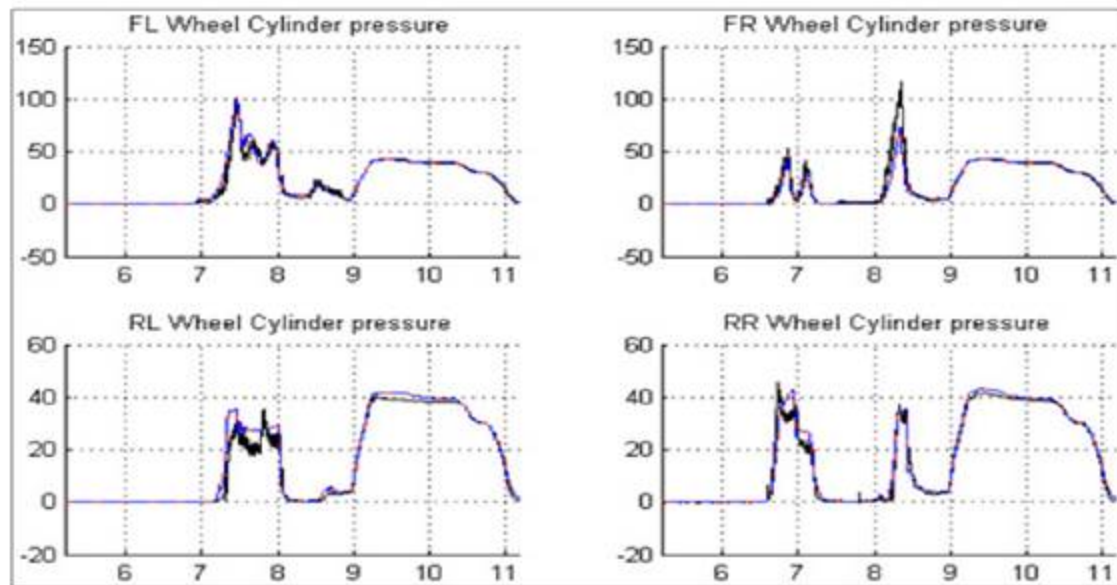

Content	
1	Introduction to ETAS
2	Virtualization Technology
3	Current Situation in Regulatory Testing
4	Case Study

Since the end of 2009, ECE regulations have allowed the use of CAE methods for ESC homologation, and in North America, the exemption from FMVSS126 compliance for aftermarket parts was phased out in 2012. Following these legislative changes, several original equipment manufacturers, aftermarket companies and ESC suppliers are using vehicle dynamics computer simulation methods to predict ESC performance and homologate vehicles.

<http://papers.sae.org/2015-01-0021/>

Simulation dataset vs In-vehicle testing result

Brake line pressures during double lane change at 100 kph
(In-vehicle test = black/blue, simulation = red).

<http://papers.sae.org/2015-01-0021/>

Summary

Virtualization Technology can improve efficiency of the regulatory testing by

- **Reduce Time**, no need to wait for testing prototype
- **Reduce Costs**, reduce number of hardware
- **No Compromise on Quality**

Thank you
