Trend of Mobility Standards

Mr. Srinivas Reddy Vinta

Regional Manager for South East Asia

TÜV NORD

Email: vsreddy@tuv-nord.com

Abstracts

We have never been as mobile as today. For us, mobility means quality of life and success. People and goods travel round the globe or just to work and to visit friends. Our economy and our welfare are based on the flexibility and reliability of roads, railways, and air transport.

To ensure that this system works smoothly in the future, the engineers safeguard existing technology and always follow new paths. We network technologies and expertise.

This means that we should reduce the pollution that traffic brings. For us, ecology also means that you can travel from point A to point B quickly and saving fuel. At heart, the good economist is an environmental protector. In short: It is our goal that you enjoy your mobility without worries. Have a good trip - into the future!
